

Glenbrook Water Cooperative Member,

On behalf of the Board and our Operations Manager, Cameron McKay, please be assured that we are not experiencing any COVID-19 operational issues. Glenbrook's drinking water is treated using a combination of ultra-violet disinfection, ozonation, and chlorination, which are on the leading edge of water treatment processes and effective at removing contaminants from water.

GWC does not anticipate any current scenario that would interrupt water availability to our community. We are committed to ensuring your water quality, reliability and security.

If any members are experiencing financial issues related to the pandemic that affect your ability to meet your dues or assessment obligations, please contact Diane Rogers.

Information about COVID-19 prevention and treatment can be found at <https://www.cdc.gov/coronavirus/2019-ncov/about/prevention-treatment.html>.

Sincerely,

Ken Riley

GWC Board President
